UCHealth does not discriminate against any person on the basis of race, color, national origin, disability, age or sexual orientation in admission, treatment or participation in its programs, services and activities or in employment. For further information about this policy, contact UCHealth's Northern Colorado patient representative at 970.495-7346.

What is the vestibular system?

The vestibular system is part of your body's balance system that provides the brain information concerning your head movement.

What is vestibular therapy?

If your vestibular system is damaged by disease or injury it can result in dizziness, spinning, imbalance and light headedness. Vestibular therapy addresses these issues using an exercise-based program. A physical therapist will evaluate your vestibular system and balance to create an individualized program to address your needs.

Dysfunction of vestibular system include:

- Meniere's disease.
- Benign Paroxysmal Positional Vertigo.
- Mal de Debarquement syndrome.
- Neuritis.
- Acoustic neuromas.
- Perilymphatic fistula.

Balance dysfunctions include:

- Aging.
- Stroke.
- Neurological disease.
- Head trauma.

Who would benefit from vestibular or balance therapy?

Anyone who is experiencing vertigo, light headedness, dizziness and unsteadiness.
